OUR SERVICES

- Electrical Installations
- Mechanical Installations
- Advanced System Infrastructure

Electrical Installations

With over 20 years of operation in this field, NETCOM has kept abreast technological advancements and especially in the area of low energy systems such as lighting controls, LED lighting, and heating controls.

In due recognition of the varying needs across different customer requirements, our team of qualified and experienced engineers craftily deploys cutting edge solutions designed with each customer in mind while ensuring that all our electrical installations are in strict accordance with the latest I.E.E. Regulations.

We push to deliver unparalleled service on time, every time.

Our specialization includes but not limited to;

- Electrical system installation
- Private, public, and commercial projects
- All forms of electrical works from fitting an extra socket in the home to comprehensive business premises installations

Mechanical Installations

We have the capabilities to deliver quality mechanical installation services across a wide range of industries and within some of the most sophisticated environments.

Using the safest and most appropriate installation methods for your industry and operating environment, we can stand-alone services or engage in complex and integrated projects solution, fully managed and controlled by our project management team.

Leveraging on our wealth of experience on various projects, we add value by providing;

- Co-ordination of services with the building programme
- Integration with other specialist services and subcontractors
- Lean construction techniques
- Full programme management utilizing fast tract solutions where feasible
- Environmental certification
- A quality, zero defects approach

Advanced System Infrastructure

We offer various advanced infrastructure systems with the use of Information Technology (IT), to provide secure, safe and comfortable Solutions targeted at Corporate clients, Governments and other industries

As a system integrator, we design and develop solutions encompassing hardware, software, installation, maintenance and service.

With core focus on Social and Industrial Infrastructure, we offer a “one stop solution” that cuts across;

- Advanced Network Design & Implementation
- Access Control Systems
- Fire Detection and Alarm System
- FM200 Automatic Extinguishing System
- File and Access Tracking System
- Surveillance System
- Public Address and Conference Systems
